

Entity Relationship Model for Gym

My check-point

Prepared by Houda

**So I write here to explain my work : we have a gym do we have as entities
(gymnasium and person)**

**By person I mean any one (if he go to the gym) so we have As entity also
(member : person go regularly to practice , Coach: he is the trainer) so both
have (name, date of brith and gender that is why I put person entity) but
they have different roles as I explained .**

**and in the gymnasium we can have session (is characterized by a type of
sport and a schedule)**

for the relationships :

Member can be at one of these gymnasiums,(1-n)

Each session has 20 members maximum . (1-20)

The session are led by a maximum of two coaches .(1-2)

at least really that what I understood so Please validate my work thanks in advance

Thank You!
